Exit Setup

(7) Internet connection, click "Next"

The screenshot shows a 'Quick Setup' screen with a blue header. Below the header is a navigation bar with four items: 'User Settings', 'Internet Connection' (highlighted in dark blue), 'Wireless Settings', and 'Device Placement'. The main content area is titled 'Choose the method to be used by the device to connect to the internet'. It contains two dropdown menus: 'My Internet Connection is' set to 'Cellular' and 'Network Mode' set to '4G/3G/2G multimode'.

(8) You can change the desired WiFi name in the network name and the required WiFi password in the password.

The screenshot shows a 'Quick Setup' screen with a blue header. Below the header is a navigation bar with three items: 'User Settings', 'Internet Connection', and 'Wireless Settings' (highlighted in dark blue). The main content area is titled 'Wireless Network Settings'. It contains a text input field for 'Network Name (SSID)' with the value '4G\_AP\_0545'. Below that is a 'Network Visibility Status' section with two radio buttons: 'Visible' (selected) and 'Invisible'. The 'Wireless Security' section is partially visible at the bottom.

(9) After reading the wireless device placement suggestions, click "Finish"

(10) Complete the setup here and reconnect to the new WiFi to access the internet

### 3. Frequently asked questions

(1) Unable to connect to new WiFi after setting up?

Please check if the entered WiFi password is correct and re-enter the correct one.

(2) Unable to connect to the internet after setting up a new WiFi connection?

Firstly, check if the SIM card being used still has data flow, Then check if the card insertion direction is as required, Finally, you can enter the settings interface to view the information displayed in the "Internet" section of the "Panel Interface". The network data connection is

enabled, and the left image below is normal and can be used; As shown in the top right image, the SIM card status is displayed as "No status" (indicating that the card is not inserted or not properly inserted); Display network data connection: "Disabled" (if the card is plugged in, there may be no data or the card may not be activated)

(3) Forgetting the login password or WiFi password can reset the factory settings and press the reset button for 5-7 seconds before releasing to restore the factory settings.
